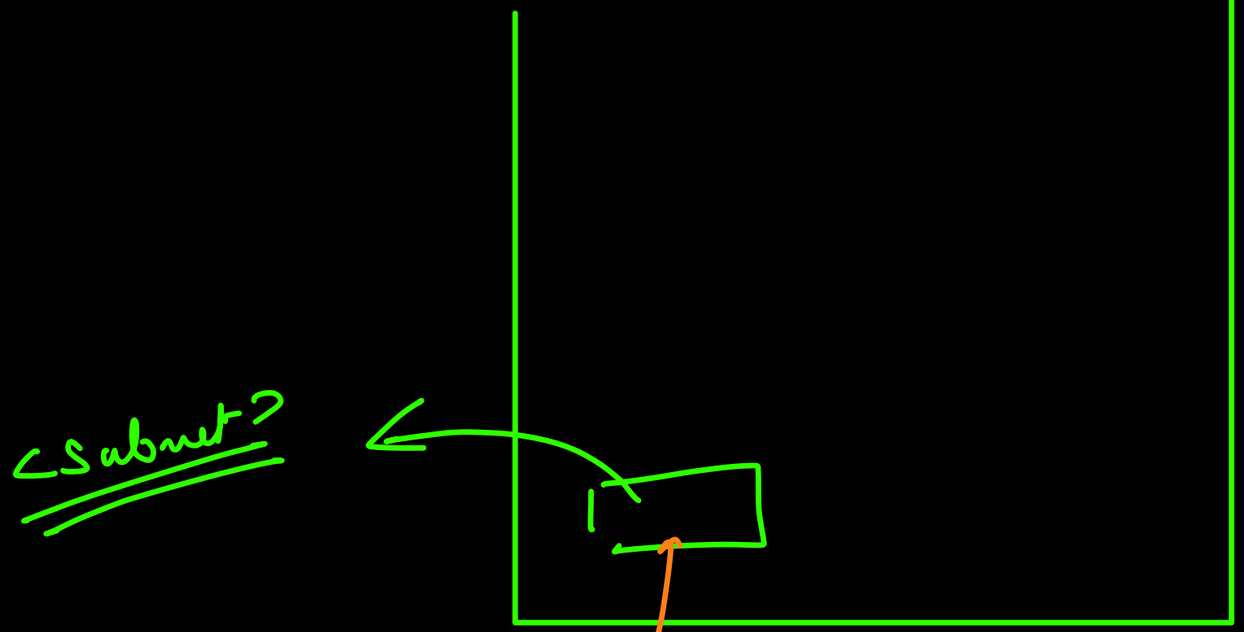
↳ Preventing Default Behaviour

<form> ... </form>

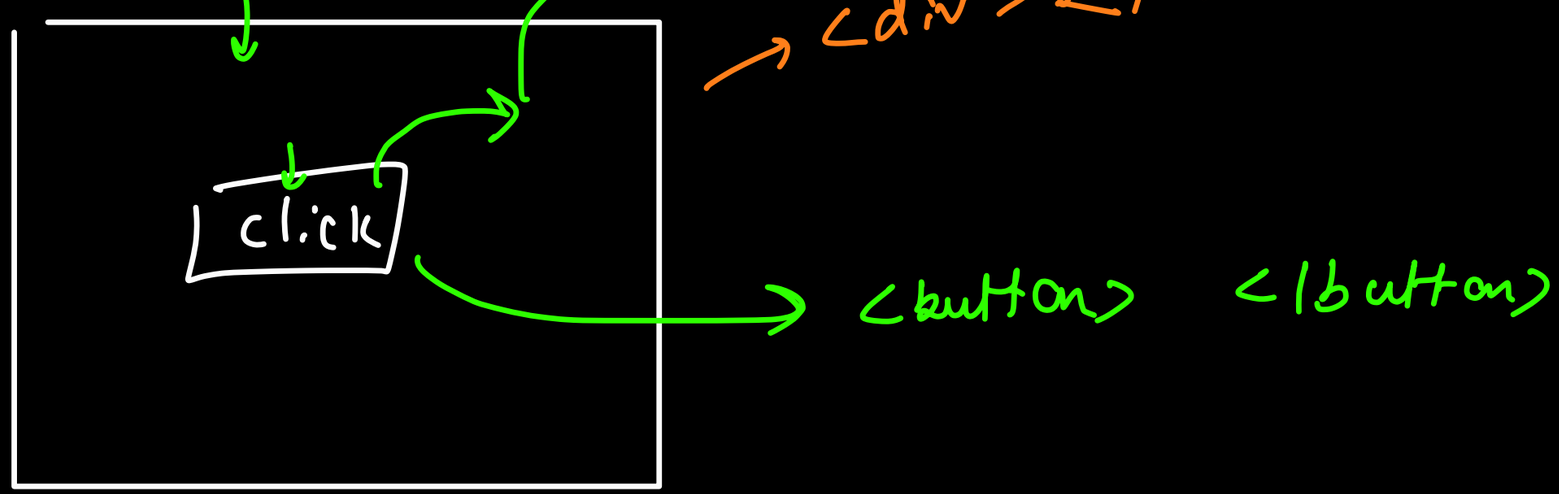


```
addEventListener("click",
(e) => {
    e.preventDefault();
})
```

e → event object

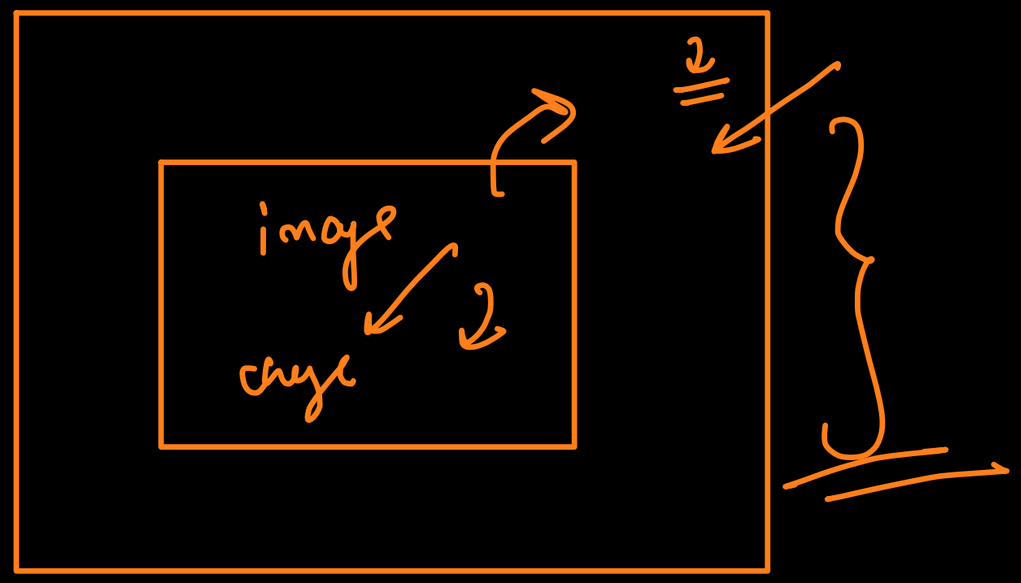
JOIN THE DARKSIDE

Event Bubbling → e.stopPropagation()



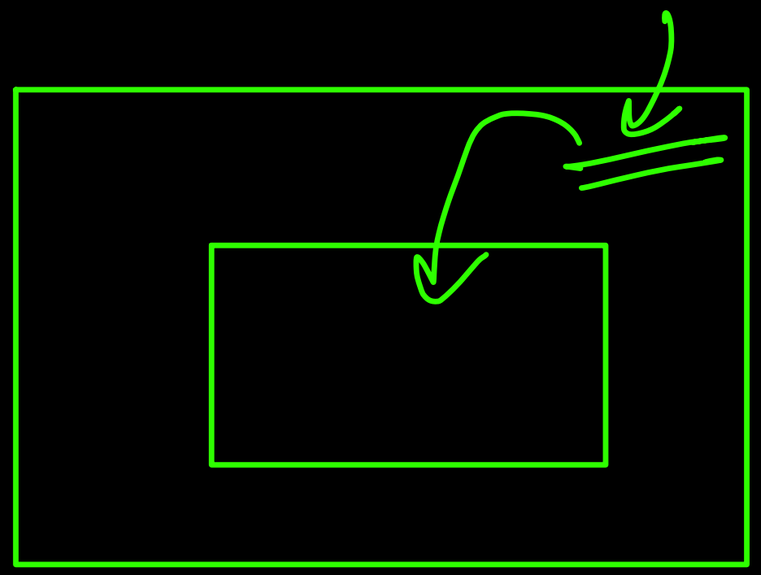
```
div.addEventListener("click", () => {})
```

JOIN THE DARKSIDE



JOIN THE DARKSIDE

Event Capture → Same like event bubbling but in reverse order



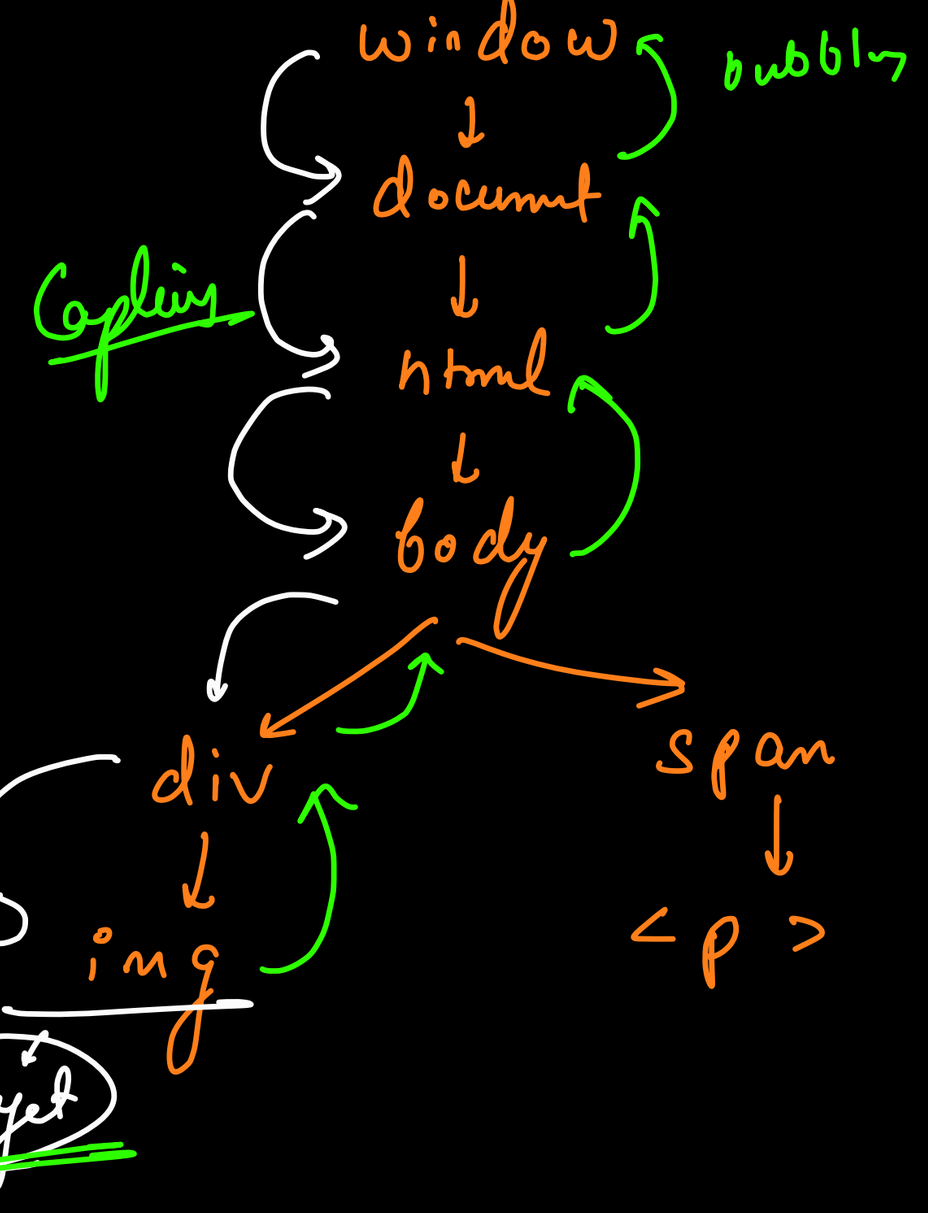
JOIN THE DARKSIDE

There are 3 phases of event propagation:

{capture: true}

1. Capturing
2. Targeting
3. Bubbling

don't pass any as false {capture: false}



JOIN THE DARKSIDE
